Cultured Products Care and Maintenance Guide

Important: Read your warranty carefully, failure to follow the following instructions could void your warranty.

ALWAYS clean with a soft sponge or cloth using aerosol foam or spray cleaner. Maintaining these products does not require hard scrubbing. To maintain the beautiful luster of your cultured products, just wipe down with bath squeegee on a regular basis. Products such as Auto Polishing Compound, Gel Gloss, and Baking Soda with Water will remove simple scratches and stains and keep your product shining.

NEVER use abrasive cleaners, metal scrubbers, or steel wool. They can scratch the material and over time, wear off your finish. AVOID placing hot objects such as curling irons directly on the surface. AVOID harsh chemicals such as drain cleaners, acetone (nail polish removers), paint removers, and hair dye. These products can cause permanent damage to the gel-coat and can discolor the resin material itself.

Given proper care, these cultured products will provide years of problem free use.
